Software outsourcing companies in the field of information technology (IT) are organizations that provide services related to software development, maintenance, and support to clients located in different geographic locations. These companies offer their expertise and resources to help businesses meet their software development needs without having to hire an in-house development team.

## Here are some key aspects of software outsourcing companies in IT

**Software outsourcing has become increasingly popular due to several factors, including cost savings, access to a global talent pool, and the ability to focus on core business activities. When a company outsources software development, it typically collaborates with an outsourcing vendor to define project requirements, timelines, and deliverables.**

**Here are some key aspects of software outsourcing companies in IT:**

1. **Services:** Software outsourcing companies offer a wide range of services, including custom software development, web and mobile application development, quality assurance and testing, software maintenance and support, software consulting, UI/UX design, and more.

2. **Expertise:** These companies employ skilled professionals with expertise in various technologies, programming languages, and domains. They have experienced software developers, project managers, designers, testers, and other specialists who work together to deliver high-quality software solutions.
3. **Offshore and Nearshore Outsourcing:** Software outsourcing can be categorized as offshore or nearshore. Offshore outsourcing refers to partnering with a company located in a different country, often in a different time zone, while nearshore outsourcing involves collaborating with a company in a neighboring or nearby country. Both options provide advantages such as cost savings and access to specialized talent.
4. **Communication and Collaboration:** Effective communication and collaboration are crucial in software outsourcing. Outsourcing companies typically establish communication channels to facilitate regular interactions with their clients, ensuring that project requirements are understood, progress is tracked, and feedback is exchanged.
5. **Project Management:** Software outsourcing companies often have well-defined project management methodologies in place. They use tools and processes to plan, execute, and monitor projects, ensuring timely delivery and adherence to quality standards.
6. **Security and Confidentiality:** Data security and confidentiality are essential considerations in software outsourcing. Reputable outsourcing companies have measures in place to protect their client's sensitive information and intellectual property.
7. **Scalability and Flexibility:** Outsourcing allows businesses to scale their software development teams up or down based on project requirements. It provides flexibility in resource allocation and the ability to quickly adapt to changing business needs.

**When considering software outsourcing, it is important to evaluate potential vendors based on their track record, client testimonials, industry reputation, technical capabilities, and cultural fit to ensure a successful partnership.**

## **Dotbase Technology and Solution**

**FPT-software**

FPT Software is one of the top technology outsourcing companies in Vietnam, with 32,000 employees. They provide many kinds of services, namely Digital platforms, RPA, AI, Smart factories, IoT, Cloud, AR/VR, Enterprise Mobilization, Managed services, Business Applications, Application services, Testing, Platform modernization, etc.

FPT – its parent company, is one of Vietnam’s most famous brands. You can see the brand in many fields of business, from technology services and education to retail.

## **CMC Global**

Founded in 2017, CMC Global is among Vietnam's top 3 IT outsourcing service providers and a division of CMC Corporation, a 27-year-old IT conglomerate in Vietnam. The company was established as a strategic move to fulfill the desire to bring Vietnamese ICT products, solutions, and services to the international market.

With support from a long-standing ICT and key insights into the local IT market, CMC Global quickly thrives to become one of the leading IT service and solution providers in Vietnam. What CMC Global has after 3 years is something: 500+ certified engineers, 70% personnel expenses reduction, and 2 years consecutively being the IT Outsourcing Service of Sao Khue Award – the Biggest Award in the Vietnam Software Industry.

With a sound profile and successful list of famous clients coming from every corner of the world and strategic partners such as Samsung SDS. CMC Global has no intention to remain the one-stop solution of an IT outsourcing supplier to international customers as it is now but strives to become a provider of system integration services and solutions in Vietnam to the world soon.

CMC Global provides traditional service offerings:

- Custom Software Development: We have saved up to 70% on personnel expenses for our 150+ customers
- Software Maintenance: Our one-stop service removes any IT concerns irrelevant to the company's goals.

- Legacy Migration: With seasoned experts, we help customers overcome the rising challenge of shrinking labor to support legacy applications.
- Testing Service: We ensure test coverage of the entire software development process by combining automated testing with real-world assurance of manual testing

CMC Global also provides:

1. Digital Emerging Services, including Cloud Migration, Cloud Managed Service, AI Consulting & Implementation, and RPA service offerings,
2. Cutting-edge solutions with our products.

## KMS Technology

KMS Technology, a global market leader in software development, testing services, and top-tier technology consulting offers an integrated suite of cutting-edge solutions that help businesses accelerate product speed-to-market without sacrificing quality. With a customer-centric approach, KMS Technology aims to fuel innovation for organizations by helping to modernize existing systems and bring new software visions to life.

Based in Atlanta, GA, and with award-winning offices across Vietnam, KMS Technology has a global footprint with a suite of companies targeted to serve clients in their respective regions and industries. KMS Healthcare brings next-generation technology solutions to healthcare software vendors, health plans, life sciences, and providers. KMS Solutions serves the Asia-Pacific market and focuses on banking and financial service-oriented technology solutions. All KMS companies continuously build and successfully launch their own software product companies through its internal incubator, KMS Labs.
